PRODUCT SPECIFICATIONS

The ASL 122 FUSION ALS package is a proportional and digital drive control system specifically designed for the needs of a person diagnosed with ALS.

The deconstructed FUSION Head Array allows a person to rest and be supported on the back pad and the forward drive direction and mode change are located at the knees or hands depending on the most consistent location for the patient.

The FUSION will allow a person to control the speed and direction fully proportionally. The adjustability options and designed to fit customizable needs and progressions. The FUSION ALS proportional head array is designed for persons with ALS or diagnoses that have quickly changing needs.

With the addition of ASL accessories, a client can wirelessly connect to an AAC device, mouse emulator and the Tecla E.
